

Guidelines for manuscripts for „Thermal Spray Bulletin“

The sections

With regard to the **EDITORIAL**, the scope (in one language in the Arial font, type size: 12) should be no more than one A4 page or **3,200 characters** (including blanks). For the publication of the editorial, we need a **digital signature and a digital passport photograph** (min. 300 dpi as a tiff or jpg format and not compressed).

An article for the "**FROM COMPANIES**" section (in one language in the Arial font, type size: 12) should have no more than **4,000 characters** (including blanks). In addition, **one or two figures** would be good.

The **SPECIALIST ARTICLE** (in one language in the Arial font, type size: 12) should not exceed **12,000 characters** (including blanks), i. e. about three A4 pages. A total of no more than **six figures or tables** should be added to this.

An article for the "**PEER-REVIEWED PAPER**" section is reviewed by our circle of experts. The article (in one language in the Arial font, type size: 12) should have no more than six pages or **20,000 characters** (including blanks). A total of no more than **eight figures or tables** should be added to this.

For the publication of the **specialist articles and peer-reviewed papers**, we need a **brief summary** (approx. five to ten lines). It is printed between the heading and the article. **From all authors**, we need a **brief personal professional history** (for publication within our Internet appearance, approx. five to ten lines, fully formulated), **the e-mail address** (in so far as this should be published) and a **digital passport photograph** (min. 300 dpi).

External form

▶ Manuscripts as a Word file (if symbols such as Ω or λ are used, please in PDF as well).

▶ Typeface: single line spacing, left-justified, heading in the Arial font, type size: 16, bold, otherwise Arial, type size: 12, margin on both sides: about 20 mm.

▶ Distinguish between figures (photographs, drawings, schematic representations and diagrams; in the case of image files, min. 300 dpi) and tables (numerical tables and tabular comparisons).

▶ Always send figures and tables separately. Write the captions and the table headings underneath the article. Number the figures consecutively and specify the

figure numbers in the manuscript text (e.g.: Fig. 3). Number tables (independently of the figures) consecutively and specify the table numbers in the manuscript text (e.g.: Table 5). Do not use any abbreviations in the wording (e.g.: diameter instead of diam.).

► Names, designations etc. according to the most recent DIN standards, DVS technical bulletins etc. and no designations such as ©, ™ or ®.

Structure (for specialist articles and scientific specialist articles)

- Title of the article (concise but unambiguous).
- Indicate the title, first name (written out in full) and surname of the author as well as his/her professional location or institute and the place of his/her activities (e.g.: Dr.-Ing. Hans Specimen, Specimen University, Specimen City; Prof. Dr.-Ing. Hanna Specimen, Specimen Company, Specimen Village).
- Summary of the content in five to ten lines.
- Actual paper, divided according to the decimal classification, beginning with "1 Introduction" and ending with "Literature".
- Specify the literature in the respective places (e.g.: [9]) and number it consecutively in the same sequence as in the text. Then indicate it collectively at the end of the manuscript, e.g.:

[1] Matting, A., and G. Jacoby: The shattering of metallic materials subjected to vibratory stresses in fractography. Aluminium 38 (1962), No. 10, pp. 654/61.

[2] Neumann, A.: Welding technology manual for designers, Vol. 1, pp. 31/40, DVS-Verlag, Düsseldorf, 1990.

Questions

We hope that, with this style sheet, we can make it formally easier for you to draft your manuscript. If you have any questions, please get in touch with:
