

Archiving

Our digital preservation policy outlines the project that all our digital records will be sustainable for the foreseeable future. As the digital contents of our journals are extremely valuable, measures are in place to ensure both its current accessibility and long-term preservation.

Web-Archiving and Preservation

Our electronic contents, such as the website, the journal archive etc. are stored on an external server. The content on one server is online and accessible to the readers. In case of failure the server would be expected to be accessible again within 24-48 hours. In the event of discontinued publication of the journal the archive will be maintained online as long as the publisher is still in business.

Self-archiving

The authors receive the final published PDF-version of their articles and may archive in personal or institutional repositories immediately after publication.
